

PROJECT DEVELOPMENT PHASE

Project: Plugging into the Future: An Exploration of Electricity Consumption Patterns

1. Development Environment

MySQL Workbench was used to create the electricity database and store electricity consumption records. Tableau Desktop was connected to MySQL for visualization.

2. Database Development

Created electricity schema, imported consumption dataset, validated tables, executed SQL queries, and verified records.

3. Tableau Development

Connected Tableau to MySQL and created worksheets for state-wise map, regional consumption pie chart, monthly usage, quarterly usage, yearly usage, Top-N and Bottom-N analysis, dashboards and stories.

4. Dashboard

An interactive dashboard was developed showing quarterly usage, monthly consumption (2019 & 2020), yearly usage and other visual analytics.

5. Story

A Tableau Story was created to explain electricity consumption trends using multiple visualizations including state maps, Top-N, Bottom-N and yearly comparisons.

6. Testing

All worksheets, filters, dashboards and story points were tested for correct visualization and interaction.

7. Result

The system successfully analyzes electricity consumption across Indian states and regions, helping users identify trends and high/low consumption areas.
